

FAR-145 REPAIR

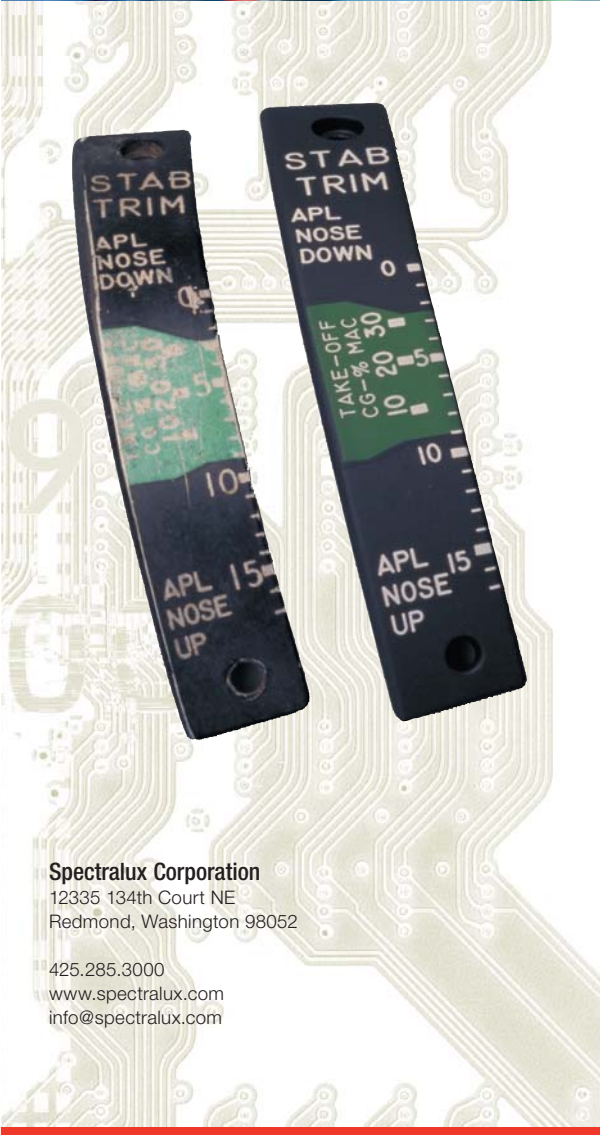

Service you can depend on. Repairs you can trust.

For over 30 years, Spectralux has made new lightplates, keyboards, lighted displays and avionics assemblies for aerospace OEMs. So it only makes sense that we'd be your choice to repair and refurbish those products - whether we made them or somebody else did. Whether you've got a cockpit full of them or only a single part. Whether you need a little cosmetic TLC, major refurbishment, a replacement for a part that's hard to find or even a retrofit for better performance.

Send us your worn, scratched, broken, beat up and dirty. We'll return them good-as-new. In a fraction of the time and cost. Fully certified to current FAA and EASA requirements. And no one offers faster turnaround in tight situations.

Turn to Spectralux for all your repair needs.
