EASA Awards Spectralux' Dlink+ Certification on Boeing 757

Redmond, WA - Spectralux Corporation announced today that the European Aviation Safety Agency (EASA) has certified the Dlink+ all-in-one ACARS system on the Boeing 757. Dlink+ FAA STC Approval was granted on March 11, 2009.

“EASA’s approval is welcome news to operators of Boeing 757 aircraft who want to utilize ACARS functionality today, and who are anticipating the approaching implementation of CPDLC under the EUROCONTROL Link 2000+ program” said Michael Burke, President of Spectralux Corporation.

About Dlink+

Dlink+ is an all-in-one ACARS system that combines a Communications Management Unit (CMU), VHF Datalink Radio (VDR), and a Control Display Unit (CDU).

Dlink+ provides ACARS functionality such as Airline Operational Control (AOC), Air Traffic Services (ATS), customized menus and Aircraft Condition Monitoring

Functionality (ACMF). Dlink+ also offers growth to ATN/CPDLC to meet the forthcoming EUROCONTROL Link 2000+ program.

About Spectralux

Founded in 1973, Spectralux Corporation is one of the most dependable manufacturers of avionics in the aerospace/defense industry. The company's industry-leading record of on-time delivery, quality, and support provides customer with the products and services they need, when they need them.
